**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-5, drawn to an electronic device containing a polythiophene derived from specified monomers I, II, each with side chains A and B, respectively, and optionally, divalent linkage D, classified in class 257, subclass 40.
  - II. Claims 6-34, drawn to a thin film transistor (TFT), classified in class 257, subclass 347.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a diode, thyristor, resistor, etcetera. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
5. This application contains claims directed to the following patentably distinct species of the claimed invention:

Art Unit: 2813

Should Applicant elect the invention of Group II, then one of the following species must be elected:

II-A. Claims 6-15, drawn to a TFT containing a polythiophene derived from specified monomers I, II, each with side chains A and B, respectively, and optionally, divalent linkage D.

II-B. Claims 16, 28-32, and 34 drawn to a TFT having specified structure III and as further limited by specified structures (1)-(17).

II-C. Claims 17-27 and 33, drawn to a TFT containing a polythiophene derived from specified monomers of structures (I) and (II), each with side chains A and B, respectively, and optionally, divalent linkage D, wherein D is connected to monomers of structure (I) and (II) via oxygen, nitrogen, or sulfur bonds to carbon.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

Art Unit: 2813

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
